

INSECT HUNT

Insects are amazing!

They can live in so many different places from ice to underground, and they play a role many aspects of our lives. They help pollinate our food, control pest insects, clean up our ecosystems, and are food for many wildlife.

How to find them:

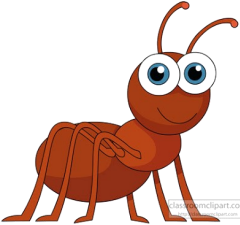

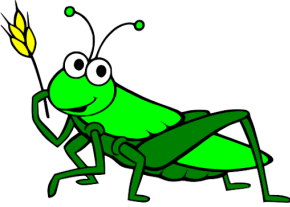

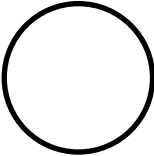

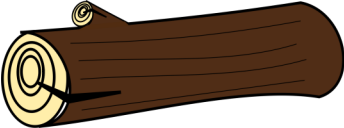

- Look up, down, and all around. Remember, they live everywhere!
- Take your time - they are very well camouflaged and know how to hide!

What you need:

- Scavenger hunt list, pencil or crayon
- Insect net and small collection box - if you want to take a closer look, just remember to be very gentle and let them go as soon as you can. Also beware of stinging insects.

Please be careful when looking for insects, and watch where you step and put your hands.
